

GP Plus - Suspended Slab

As part of Candetti's on going aim to keep local residents and businesses informed of what is happening on the domain site Candetti has held Information Sessions on site for directly adjacent residents and business owners.

This was a great opportunity for adjoining residents and businesses to come along and chat to our project team about day to day activities on site, and learn more about how the project effects them. It was also an opportunity to discuss any general concerns and an opportunity to gain a better understanding of what is happening in their own 'backyard'.

There was a brief safety induction before going on a site for a short site

tour followed by light refreshments.

Updates about the Domain site development can also be found on the website at www.infrastructure.sa.gov.au. Invitations will be sent out very soon for the next session.

Our team are looking forward to meeting adjoining residents to show off this fantastic and exciting project.

Team Member Profile

Matthew Gooding - Project Manager

Age: 36

Matthew is the Project Manager for both the GP Plus and State Aquatic Centre projects on the site. He has been with Candetti in excess of 10 years during which time he has worked on some amazing projects which have taken him all over Australia and across Europe to investigate leading technologies and innovations. Many of Matt's successful projects have included aquatic facilities which make him the perfect candidate for the State Aquatic Centre (SAC) at Marion. He also has significant office construction experience which matches well to the GP Plus building on the site.

Matthew is a father of 2 young children and a keen sports man, representing Australia in men's netball.

Progress Report From Site

What's been happening? In short...a lot. Both the State Aquatic Centre and GP Plus Health Care building are progressing rapidly.

On the Aquatic Centre side of things the ground floor slab and all major excavation works, including the 15m deep dive bowl and nearing completion.

The only excavation works remaining is the perimeter detail and

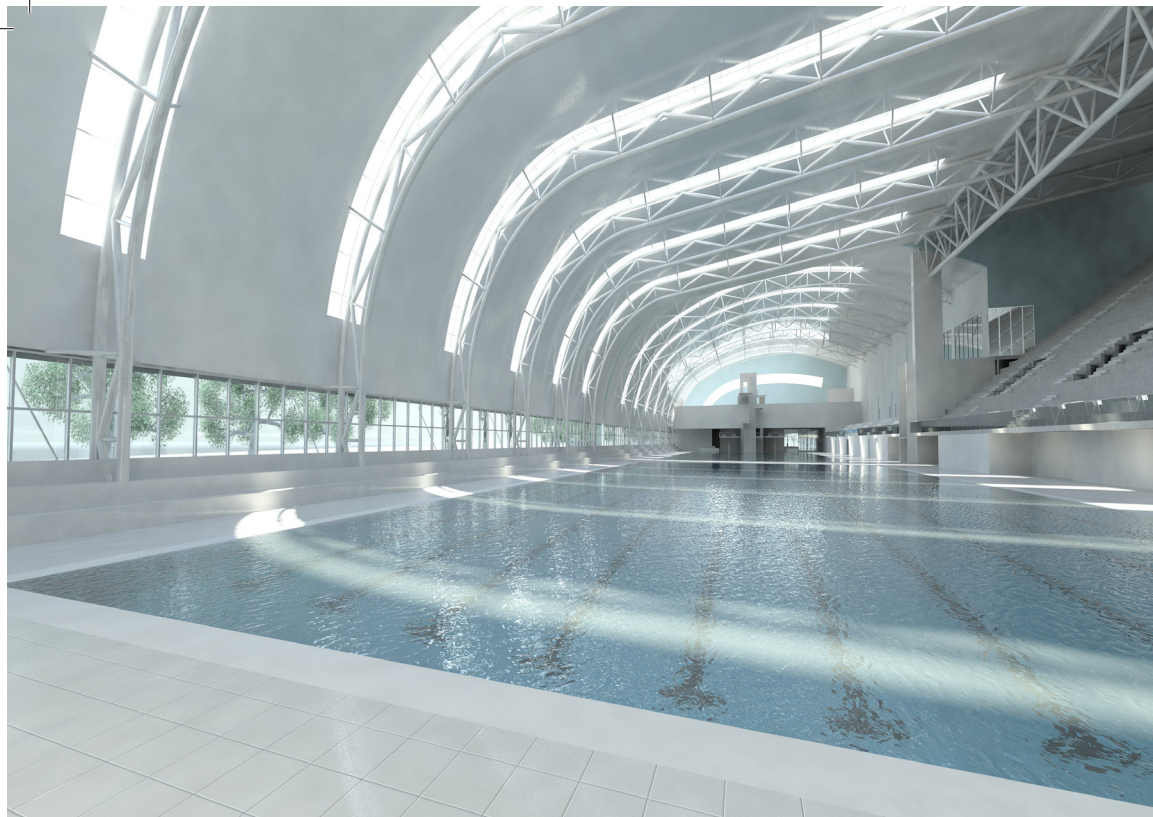

footings to the leisure water area.

The swimming pool excavation and concrete works are rather impressive looking from the Diagonal / Morphett Road intersection and is an indication of the volume of work

undertaken already.

The GP Plus undercroft car parking level has been completed and the suspended ground, 1st, 2nd & 3rd levels are currently under construction and due to be completed in May 2010.

Currently in excess of 1500 cubic metres (m3) of concrete is being poured on a weekly basis throughout the site.

State Aquatic Centre Pool

What's happened to date

More Concrete! Currently in excess of 1500 m3 of concrete is being poured on a weekly basis.

March and April 2010 saw the major construction of the GP Plus structure with 3 of the four suspended levels completed during this time. It was a challenge for the site management team to complete this amount of work which has been a considerable effort by all involved.

The Aquatic Centre will look relatively inactive this month on the surface but we can assure you there will be lots' going on underground.

More specific to the main building structure, the footings for the dive tower were constructed including all the

associated pipework for the pool hydraulics and dive safety bubble system (used during the training of the divers to cushion their fall). Sections around the base of the pools were also poured this month ready for the installation of structural steel which is expected to commence in May 2010.

Activities to expect on site in April & May

The next two months are going to be an exciting time on the SAC & GP Plus buildings as major elements of the development come together above and below ground.

In May 2010 the dive tower will be constructed, which is a 10 metre high concrete structure, which is sure to generate some interest.

Scheduled for late May 2010, we will be taking delivery of the structural steel roof trusses for the State Aquatic Centre and erection will start immediately.

This will be an impressive structure and give residents and community a true understanding of the form of the structure.

Throughout May 2010 there will still be significant activity below ground such as excavation works to the leisure water area and structural works to the swimming pools.

There is a considerable amount of detailed work within the plant and access maintenance areas.

You can also expect to see an increase in the number of workers on site, with the inclusion of services and fitout contractors.

As always Candetti will ensure that any disruption caused during these activities will be kept to a minimum.
