

## SAMIS Build 14.2

### Overview

The SAMIS Build Initiatives & Enhancements Communication Bulletin contains information about business and system changes that have occurred and been deployed into SAMIS production.

---

### Deployment Date

20<sup>th</sup> August 2020

---

### Enhancement Details

- **SE-276 Modify Advanced Search Form**  
In Advanced Search under Facilities, the Alternate Identifier has been renamed to Alternate Facility Number and a new field of Work System ID has been added. Under Search for Sites Alternate Identifier now has a drop down list of options to search for. Assets have been added to Search for and the options to search are:  
SAMIS ID  
(ER01) Equipment ID  
(ER02) Barcode No
- **SE-478 Unable to dispose of assets on some sites due to Size**  
When trying to dispose of Assets on a large site we were receiving an error message of Can't reach this page. This is caused by the function that builds an asset tree and it was reaching a time limit.
- **SE-383 Add Barcode No and Equipment ID Validation**  
When you add a Barcode or Equipment ID into SAMIS, it will now search to make sure that the Barcode or Equipment ID being entered is unique.
- **SE-483 Grey out Service Locations for Sites Under Interface**  
Service Location will be greyed out for all USERS for Sites that have been added to the WMS Interface.
- **SE-466 SVG Components to be removed from SAMIS**  
We are removing all the SVG preparation and requirements out of the SAMIS site and building specification as the SVG program is no longer supported.

- **SE-451 Disposal of SAMIS Assets with Future Date**  
When disposing of an asset checks are now put in place to check that the disposed date is less than or equal to the current date.
  - **SE-496 Change Email address on SAMIS Home Page**  
Due to Department Change, the email address for the AGFMA Service Desk has now changed to [DIT.AGFMAServiceDesk@sa.gov.au](mailto:DIT.AGFMAServiceDesk@sa.gov.au)
- 

### Enhancement Details – System Administrators Only

- **SE-485 Sites under Interface Screen**  
The following changes have been made to the Sites Under Interface Screen.  
Addition of a magnifying glass on the table to be able to navigate to the appropriate record.  
Addition of a Delete button to take site out of the interface control
- **SE-472 Archive asset Attribute Record Function**  
When an Attribute record is inactivated, this stops any new Asset Attribute records being created but all the existing Asset Attribute records remain available.
