

Gawler East Link Road Project & Tulloch Road Intersection Upgrade

Traffic Signals

The Department of Planning, Transport and Infrastructure (DPTI) advises that traffic signals were commissioned on 8 April, 2020, at the Main North Road intersection with Tulloch Road and Morrow Avenue, Evanston Park, and on 24 April, 2020, at the Main North Road intersection with Potts Road and Para Road, Evanston Park.

Works at both intersections are continuing, with temporary traffic signal detector loops and trailer mounted cameras installed this week. The final traffic signal detector loops are planned to be installed following completion of the final asphalt wearing course which is expected to be completed early June, weather permitting.

We recognise delays have been experienced at both intersections and sincerely apologise for any inconvenience this has caused. DPTI's Traffic Operations is monitoring the flow of traffic at both intersections, and have made some changes to the priority and timing of the traffic signals, to cater for school traffic and weekend peak periods. Your patience and understanding is appreciated.

It should be noted that both intersections will be operating in their ultimate configuration in June 2020, weather permitting, which will see an additional through lane added to Main North Road in both directions. This will also include Tulloch Road which will have an additional combined through and right turn lane (to Morrow Avenue and Main North Road, respectively).

Once complete, the traffic detector loops and additional lanes will significantly improve the performance and traffic capacity of the intersections.
